

# Glass-box models trained on Heart Disease (same data, same API)

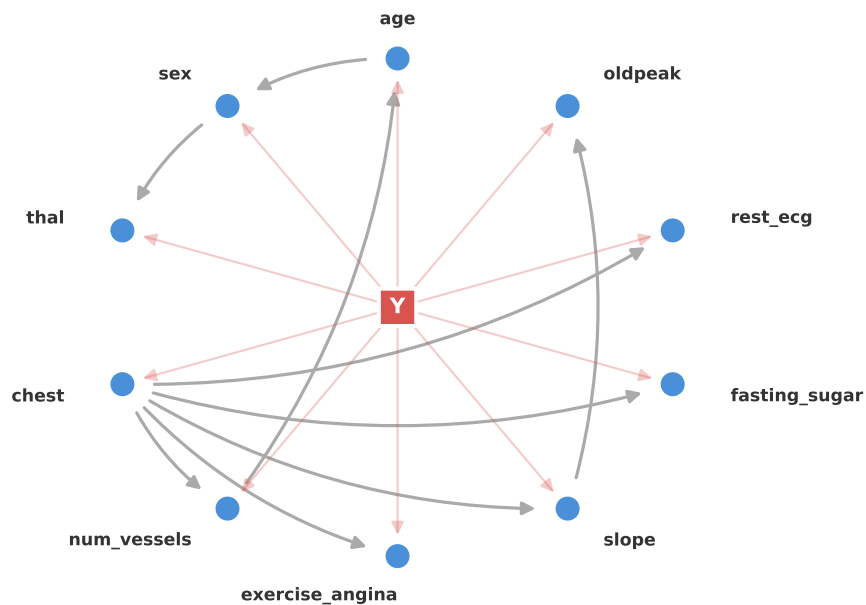

(a) EBM: Shape function

(b) RuleFit: Sparse rule ensemble

```
y = intercept
-1.39 * [oldpeak <= 1.7 AND num_vessels <= 0.5 AND blood_pressure <= 151]
-0.95 * [blood_pressure <= 151 AND oldpeak <= 2.35 AND blood_pressure > 113.5]
+0.92 * [blood_pressure <= 157 AND max_heart_rate <= 171 AND age <= 64.5]
+0.60 * [age <= 62.5]
-1.25 * [age <= 57.5 AND thal <= 4.5]
```

(c) TAN: Bayesian network

(d) MARS: Piecewise linear model

```
y = 0.7567
- 0.09581*h(6 - thal) - 0.3049*h(1 - num_vessels)
+ 0.2974*h(chest - 3) - 0.2022*h(2 - slope)
```
